

# BeeMail, The NEXT Generation of File Transfer..

## BeeMail Single User Client - Send files of ANY size, with your current Email

BeeMail is a single user extension for Windows or Macintosh e-mail clients that allows users to securely transfer files of ANY size as attachments. BeeMail supports any email client using SMTP as the sending protocol, such as Outlook, Outlook Express, Eudora, Notes etc. BeeMail comes with one year of access to 50MB of secure storage space (or you may use your own ftp site for unlimited storage space).

There has always been a desire to use email for sending files. Email is easy to use and it is nearly universal. Unfortunately, in the past, email was not suitable for this purpose because it could not handle the transfer of large files efficiently or reliably.

The BeeMail Single User file transfer extension for email changes everything. BeeMail turbo-charges file transfers for ANY email system. BeeMail speeds the transfer with "On-the-Fly" streaming compression and BeeMail secures the transmission with the Https-SSL secure protocol.

*American corporations spend 4 billion dollars a year shipping data via Air-Courier!*

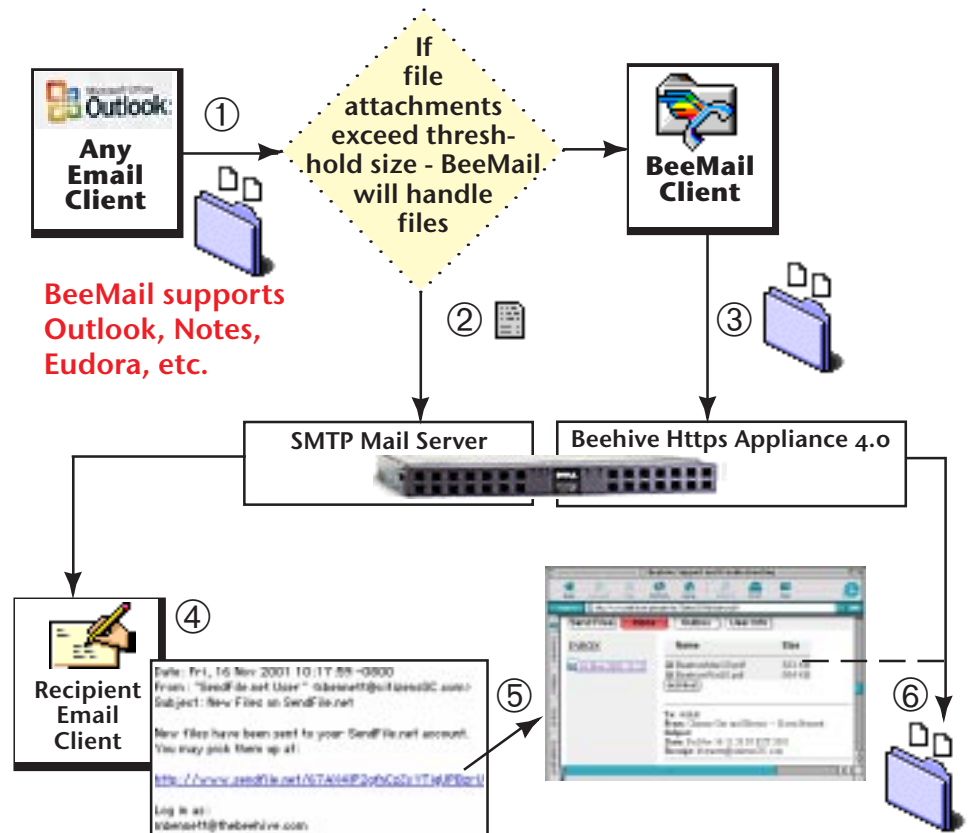

*Why ship Air-Courier when BeeMail is faster, cheaper, simpler and more secure?*

*Start using your Email system to E-Courier large files and stop wasting time and money using Air Courier Services!*

### How Does BeeMail Work?

- 1) Any email user with the BeeMail utility installed can send email with LARGE files attached. All BeeMail operations are Completely Transparent to the Email user!
- 2) If the attachment size exceeds a certain threshold set by the administrator (typically 1MB) then BeeMail separates the attachments from the email body and substitutes a URL for the attachments. The message body is then handled by the standard mail server.
- 3) BeeMail, operating in the background, sends the files to the default https secure file transfer server and applies streaming compression "on the fly" to speed transfer times.
- 4) When the email is received by the recipient, they notice that there is a URL and instructions for file retrieval appended to the message.
- 5) The recipient clicks on the URL in the message and his browser is launched with the BeeMail Java Applet loaded.
- 6) The files are downloaded to the user's computer and are streaming decompressed "on the fly".

### BeeMail by the Numbers:

### Licensing

When BeeMail is ordered as a Single User annual subscription for \$49.95, you automatically receive 50MB of secure storage space, (the 50MB of secure storage space you are assigned can hold considerably more than a 50MB of files because the files are compressed). You may optionally use your own ftp storage space or rent additional HTTPS Secure Internet storage space from Beehive Software. Beehive Secure File Transfer storage space may be purchased in 500MB blocks from Beehive. This storage space is billed annually, in advance of use. Use the order form on the back to order storage space.

## Implementing the BeeMail File Transfer Extension has many Benefits!

- *BeeMail will Save You Money* - by reducing the amount of money you spend on air-courier fees sending data.
- *BeeMail is the Fastest Way to Transfer Files* - With streaming file compression, BeeMail is many times faster than email or ftp.
- *BeeMail is Secure* - BeeMail uses the Https-SSL secure protocol; it is suitable for HIPAA, Banking and DOD sites.
- *BeeMail is Easy to Use* - BeeMail has no user interface to learn and you are free to attach files of ANY size.
- *BeeMail gives you More Control* - With BeeMail, you control when you want to download files, unlike standard email where large file attachments will immediately download whether you are "ready-or-not".

### *BeeMail, Single user Order Form*

Code	Description	Your Price
<b>BeeMail Clients</b> <i>All BeeMail Subscriptions include telephone technical support for the duration of the subscription.</i>
